

Overview

TODO

Installation

The installation guide can be found over [here](#).

Features

- Multiple object types supported.
- Customized starting number.
- Best effort sequential numbering.
- Custom Sequence Prefix (e.g. INV554325)
- Custom Sequence Postfix (e.g. 554325ORD)
- Combined prefix and postfix (e.g. HS_554325INV)
- Zero padded numbers (e.g. 00001123)
- Combined prefix, postfix and zero padding (e.g. HS_00000554325_INV)

Considerations

Numbers are generated sequentially but not necessarily assigned in chronological order. This is because of inevitable network delays and platform redundancy mechanisms. Please [contact us](#) if you need a solution that has stricter requirements.

There is a delay between object creation and the sequence number being assigned. This is typically done in less than a minute but depends on system load. Feel free to [contact us](#) if a more defined service time is required.

Object Types Supported

- Deals
- Contacts
- Companies
- Appointments
- Courses
- Invoices
- Listings
- Tickets
- Orders

For additional types, including Custom objects, please [contact us](#).
